Post-Socialist World Orders: Russia, China and the UN System

Post-Socialist World Orders: Russia, China and the UN System is a welcome addition to post-Cold War literature on international relations. The book presents a study of Soviet/Russian Federation and Chinese policies in selected UN institutions from the early 1980s to the early 1990s. It examines the relationship between Russia and China with the UN system, focusing on their influence in the Security Council and their contributions to international policy. The book also explores how the UN system has evolved in response to changes in the international order. Post-Socialist World Orders constitutes a lively and timely addition to post-Cold War literature on international relations.
We will look after Russia and its glorious history and will make service to our G77 Tyrants, and UN Boss Demand “New World Order”.
